

AGS art brief - checklist for your own AI agent

A practical brief for generating artwork with a separate AI tool and importing it into Alien Guitar Secrets (AGS). Hand the relevant section to your image AI, get the files back, and send them to me to wire in.

Everything must fit the AGS look: cosmic / deep-space, dark backdrop, neon accents (electric purple #6A00FF, cyan #00BFFF, alien teal #00FFD5), premium and a little sci-fi.

READ THIS FIRST - two very different kinds of asset

There are two buckets, and they import very differently. This matters a lot for how much work it is.

Bucket A - Avatars = real picture files (easy to import)

The avatars already ARE photo image files in the app. If your AI produces new ones in the same size and naming, I can drop them straight in. Low effort.

Bucket B - Guitars, amps, picks, pedals = currently drawn by code, NOT pictures

Right now the app does not use any picture files for guitars, amps, picks or pedals. It draws every one of them from instructions in code (colours, shape, hardware), so they can spin in 3D and recolour instantly. There are no image files to "replace".

So if you want picture-based guitars/amps/picks/pedals instead, that is a bigger change, and you need to decide the trade-off:

- Pros of switching to pictures: they can look as rich/photoreal as your AI can make them.
- Cons of switching to pictures: you lose the live 3D spin and the instant recolouring; every item becomes a fixed flat image; and I have to build a new picture-based display to replace the code-drawn one (extra work on my side).

Decision needed from you (per item type): keep the current code-drawn art, or switch that type over to imported pictures? You can mix - e.g. keep guitars code-drawn but bring in picture amps. Tell me which, and I'll set it up.

The specs below for Bucket B assume you have chosen pictures for that type.

Universal rules (apply to every asset)

- [] Format: PNG.
- [] Background: transparent (no backdrop) for everything EXCEPT avatars (avatars keep their dark cosmic backdrop - see below).
- [] One subject per file, centred, generous even margins, not cropped at the edges.
- [] Consistent camera angle and lighting across a whole set - all picks shot the same way, all amps the same way, etc. Mismatched angles look broken in a grid.
- [] Consistent scale within a set (a "mythic" pick and a "common" pick should be roughly the same size in frame).

- [] No real brand names or logos. The app deliberately uses made-up brands (e.g. "BOZZ", "MARSDEN", "VOXEN") and "inspired by" naming. Do not put Fender/Gibson/Boss/Marshall etc. names, headstock logos, or exact trademarked shapes on anything.
 - [] Naming: use the EXACT filenames in the tables below. The app matches art to items by filename. A typo = a missing image.
 - [] Keep file size sensible. Photoreal PNGs get heavy. The 60 avatars alone are ~87 MB, which is already a lot for a phone app. Aim for the smallest file that still looks good; I can compress further on import.
 - [] Deliver each set in its own folder, filenames lowercase, no spaces.
-

1. AVATARS (Bucket A - drop-in ready)

The player's character: a head-and-shoulders portrait of a being.

- [] Size: 896 x 1280 px (portrait, 7:10). Keep this ratio; you may go larger at the same ratio (e.g. 1344 x 1920) for sharper images.
- [] Framing: head and shoulders, face centred, eyes about a third down from the top. Looking toward camera.
- [] Background: keep a dark cosmic backdrop (deep space, subtle nebula/stars, soft rim light in purple/cyan/teal). NOT transparent.
- [] Style: photoreal / cinematic portrait, consistent across all 60 so they look like one set.
- [] EYES - make them warm and loving. Soft, kind, friendly eyes with a gentle catch-light; a faint, warm almost-smile in the eyes. Avoid cold, blank, aggressive or "dead" stares. This applies to every being, aliens included (a Grey can still look gentle and benevolent).

The six beings (species)

- Human - ordinary human.
- Nordic - tall, fair, classic "Nordic alien" human-like look.
- Pleiadian - ethereal, luminous, beautiful human-like being.
- Hybrid - human/alien mix: mostly human with subtle alien hints (slightly larger eyes, finer features).
- Grey - classic grey alien: smooth grey skin, large dark almond eyes, no hair. (Still give it gentle, loving eyes.)
- Reptilian - humanoid reptile: scaled skin, ridged brow, no hair.

What varies

- Gender: male and female for every being.
- Hair colour (human-like beings only): Black, Brown, Blonde, Red, Silver, Blue, Violet. (Grey and Reptilian have no hair - one image per gender.)

Filenames (60 total) - use EXACTLY these

Human-like beings (human, nordic, pleiadian, hybrid) - one per hair colour:

```
avatar_<species>_<gender>_<hair>.png
```

where <species> = human | nordic | pleiadian | hybrid,

<gender> = male | female,

<hair> = black | brown | blonde | red | silver | blue | violet.

That is 4 species x 2 genders x 7 hair colours = 56 files, e.g.:

- avatar_human_male_brown.png

- avatar_nordic_female_silver.png
- avatar_pleiadian_female_violet.png
- avatar_hybrid_male_black.png

Hairless beings (Grey = alien, Reptilian = reptilian) - one per gender:

```
avatar_alien_male.png
avatar_alien_female.png
avatar_reptilian_male.png
avatar_reptilian_female.png
```

That is 4 files. 56 + 4 = 60 total.

Note: the Grey alien's files use the word alien (not grey). Keep that spelling.

2. GUITARS (Bucket B - only if you choose pictures over the current 3D)

- [] Size: 1024 x 1024 px, transparent background.
- [] View: whole guitar, front on, neck pointing up, same angle for all 31.
- [] Style: clean studio product shot, cosmic premium finish, soft neon rim light. No headstock logos.
- [] One file per guitar id, named guitar_<id>.png.

The 31 guitars (id - name)

guitar_nebula-starter.png	Nebula Starter
guitar_comet-cruiser.png	Comet Cruiser
guitar_asteroid-axe.png	Asteroid Axe
guitar_lunar-lancer.png	Lunar Lancer
guitar_solar-spark.png	Solar Spark
guitar_plasma-drifter.png	Plasma Drifter
guitar_quasar-quake.png	Quasar Quake
guitar_pulsar-prime.png	Pulsar Prime
guitar_meteor-mauler.png	Meteor Mauler
guitar_vortex-vanguard.png	Vortex Vanguard
guitar_singularity-shredder.png	Singularity Shredder
guitar_eventide-eclipse.png	Eventide Eclipse
guitar_woodstock-white.png	Woodstock White Bolt
guitar_texas-number-one.png	Texas Flood No.1
guitar_black-strat.png	Comfortably Black
guitar_appetite-paul.png	Appetite Goldtop
guitar_number-one-lp.png	Stairway No.1
guitar_frankenstrat.png	Frankenbolt
guitar_polka-v.png	Polka Nova V
guitar_jem-floral.png	Lydian JEM-Star
guitar_js-chrome.png	Surfing Chrome
guitar_majesty.png	Majesty Starcrown
guitar_n4-natural.png	Extreme N-Nova
guitar_bullseye-lp.png	Bullseye Berserker
guitar_yngwie-cream.png	Vanilla Fury
guitar_greeny-burst.png	Greenstone Burst
guitar_at-burst.png	Melodic Maple Burst
guitar_spaceman-lp.png	Spaceman Smokestack
guitar_starchild-iceman.png	Starchild Mirror
guitar_demon-axe.png	Demon Axe Bass
guitar_agc-masterpiece.png	AGS Galactic Masterpiece

The names hint at the vibe ("inspired by" real legends) - use them for mood, but keep shapes/finishes generic and logo-free.

3. AMPS (Bucket B - only if you choose pictures)

- [] Size: 1024 x 1024 px, transparent background, front on, same angle for all.
- [] Style: cosmic guitar amplifier/cabinet, glowing control panel, made-up brand badge only.
- [] One file per id, named amp_<id>.png.

The 5 amps (combo / stack / fullstack)

amp_amp-pulse.png	Pulse Cube 15	(small practice combo)
amp_amp-orbit.png	Orbit Stack	(half stack: head on a 4x12 cab)
amp_amp-plasma.png	Plasma Halfstack	(glowing-tube half stack)
amp_amp-galaxy.png	Galaxy Fullstack	(head over a double stack of cabs)
amp_amp-bigbang.png	Big Bang Wall	(huge full stack, loudest rig)

4. PICKS (Bucket B - only if you choose pictures)

- [] Size: 512 x 512 px, transparent background, single plectrum, point down, same angle for all.
- [] Style: premium guitar pick with the named finish (holographic, foil, glitter, galaxy swirl, marble, neon glow, carbon weave, pearl, etc.).
- [] One file per id, named pick_<id>.png.

The 17 picks (id - name)

pick_pick-onyx.png	Onyx Standard	(matte black)
pick_pick-solar.png	Solar Flare	(amber)
pick_pick-holo.png	Holographic Nebula	
pick_pick-glitter.png	Quasar Glitter	
pick_pick-foil.png	Stardust Foil	(mirror foil)
pick_pick-prism.png	Prism Pulsar	
pick_pick-aurora.png	Aurora Pearl	
pick_pick-singularity.png	Singularity	(neon, black-hole vibe)
pick_pick-glitter-cobalt.png	Cobalt Glitter	
pick_pick-carbon.png	Carbon Vortex	
pick_pick-neon-pink.png	Hot Pink Laser	
pick_pick-neon-acid.png	Acid Pulse	(toxic green)
pick_pick-galaxy.png	Galaxy Swirl	
pick_pick-marble.png	Marble Comet	
pick_pick-holo-gold.png	Holo Gold	
pick_pick-galaxy-void.png	Void Spiral	
pick_pick-marble-obsidian.png	Obsidian Vein	(black marble + gold)

5. PEDALS (Bucket B - only if you choose pictures)

- [] Size: 768 x 768 px, transparent background, top-down view of a guitar effects stompbox, footswitch at the bottom, knobs at the top, same angle for all.
- [] Style: cosmic effects pedal; made-up brand text only (e.g. BOZZ, SONIK, TUBEROAR, FXR); knob count per the notes below.
- [] One file per id, named pedal_<id>.png.

The 13 pedals (id - name)

pedal_pedal-fuzz.png	Fuzz Comet	(orange, 3 knobs)
pedal_pedal-delay.png	Echo Nebula	(blue, 3 knobs)
pedal_pedal-overdrive.png	Warp Drive	(green, 3 knobs)

pedal_pedal-chorus.png	Quantum Chorus	(purple, 3 knobs)
pedal_pedal-reverb.png	Black Hole Reverb	(near-black, 3 knobs)
pedal_pedal-distortion.png	Supernova Dist.	(red, 3 knobs)
pedal_pedal-boost.png	Toxic Boost	(green sparkle, 3 knobs)
pedal_pedal-holo.png	Hologram Haze	(holographic shell, 3 knobs)
pedal_pedal-sparkle.png	Stardust Drive	(pink sparkle, 3 knobs)
pedal_pedal-tremolo.png	Pulse Tremolo	(blue sparkle, 3 knobs)
pedal_pedal-chrome.png	Chrome Phaser	(chrome, 1 knob)
pedal_pedal-flange.png	Solar Flange	(orange holo, 3 knobs)
pedal_pedal-octave.png	Quantum Octave	(black holo, 1 knob)

6. STRAPS (optional - Bucket B, currently code-drawn)

If you also want picture straps:

- [] Size: 1024 x 1024 px, transparent background, strap laid out (slight curve or straight), same angle for all.
- [] One file per id, named strap_<id>.png. There are 18 straps (Cadet Webbing, Comet Tail, Woven Galaxy, Meteor Leather, Plasma Weave, Eclipse Royale, Star Studded, Pulse Chevron, Diamond Lattice, Solar Chevron, Gold Rivet, Ice Lattice, Hot Rod Flames, Cosmic Leopard, Thunder Bolt, Nebula Tie-Dye, Zebra Static, Prism Rainbow). Ask me for the exact id list if you go this route.

Copy-paste prompt templates

Replace the bold bits per item. Run one consistent "style seed" across a whole set so they match.

Avatar:

Photoreal cinematic head-and-shoulders portrait of a female Pleiadian being, silver hair, gentle warm loving eyes with a soft catch-light and a faint kind almost-smile, looking toward camera. Dark deep-space background with a subtle nebula and soft purple/cyan rim light. Centred, eyes a third from the top. 896x1280 portrait. No text, no logo.

Guitar:

Studio product shot of a futuristic electric guitar, front on, neck pointing up, <finish/colour vibe from the name>, cosmic premium look with soft neon rim light, on a fully transparent background. No brand name or headstock logo. 1024x1024, centred with even margins.

Amp:

Studio product shot of a cosmic guitar <combo / half stack / full stack> amplifier, front on, glowing control panel, made-up brand badge only, transparent background, soft neon rim light. 1024x1024, centred.

Pick:

A single premium guitar plectrum, point down, <finish: e.g. holographic nebula> finish, studio lighting, transparent background. 512x512, centred.

Pedal:

Top-down view of a guitar effects stompbox, footswitch at bottom, <N> knobs at top, <colour> enclosure with <accent> graphics, made-up brand text only, transparent background. 768x768, centred.

Hand-back checklist (what to send me)

- ☐ All files named EXACTLY as in the tables (lowercase, no spaces).
 - ☐ PNG; transparent background for guitars/amps/picks/pedals/straps; dark cosmic backdrop for avatars.
 - ☐ Consistent angle, lighting and scale within each set.
 - ☐ No real brand names/logos.
 - ☐ For each Bucket B type, tell me your decision: keep code-drawn or switch to these pictures (and whether it's for the web app, the phone app, or both).
 - ☐ Zip each set in its own folder and send them over - I'll import and wire them up.
-
